Confirmation of the use of Ultrasol® Oxy Wipes for Use in food industry based on a risk assessment according to (EC) 852/2004 (as of 04.03.2021) on food hygiene (HACCP)

We hereby certify that the following product is suitable for rapid disinfection of surfaces in food industry and that the requirements of a HACCP concept are met when used properly:

Product name (Version): ULTRASOL® OXY WIPES incl. Ultrasol® Oxy Wipes XL (Formulation 007-V1)**Regulatory status:** Biocidal product – PT-2 Disinfectants and algaecides not intended for direct use in humans and animals and PT-4 Food and feed**Composition:** 100 g solution contains as biocidal active substance: 7 g Hydrogen peroxide, 0,1 g glycolic acid, 0,1 g peracetic acid**Assessment:** ULTRASOL® OXY WIPES consist of 80% water and the active ingredients mentioned as well as a small proportion of additives that are also used in dishwashing detergents. Surfaces that are cleaned and rinsed before disinfection can therefore be used again immediately after they have dried and the exposure time has expired. Otherwise, after every tenth product application at the latest, an intermediate cleaning should be carried out, for example with a moistened microfibre cloth or a suitable disposable cloth, in order to remove the product residues.

Provided a proper use and regular intermediate cleaning is taking place, ULTRASOL® OXY WIPES can be safely used within the framework of an HACCP concept.
